August 1, 2017

The Region & Country Directory lists the geographical coverage by region of the Power Systems Research market databases. We cover 193 countries, far more than any other company that tracks global engine production data.

Introduction

Power Systems Research tracks the production and in-service population of engines and engine-powered products and analyzes the manufacturers producing them. Twelve regions and 193 countries of engine and product origin are monitored. That's more engine data than any other research company regularly collects.

The Region & Country Directory is an index of the 12 regions and 193 countries that Power Systems Research monitors.
